Nomenclatura

A lo largo de este tema se utilizarán distintos símbolos para distinguir elementos importantes dentro del contenido. Estos símbolos son:

🔔 Actividad opcional. Normalmente hace referencia a un contenido que se ha comentado en la documentación por encima o que no se ha hecho, pero es interesante que le alumno investigue y practique. Son tipos de actividades que no entran para examen

👁 Atención. Hace referencia a un tipo de actividad donde los alumnos suelen cometer equivocaciones.

UD03. OPERATING SYSTEMS: FUNCTIONS AND CHARACTERISTICS

Internal components. Activities

- (1) A system has the following resources: a CPU, two disks (DISC1, DISC2) and a printer (PRN).
There are two types of process according to the needs of resource utilization:

Process kind 1

CPU	DISC1	DSC1	DSC1	CPU	CPU	PRN	IMP	PRN	PRN	PRN	PRN	
	CPU 0	1	2	3	4	5	6	7	8	9	10	11

Process kind 2

CPU	CPU	CPU	CPU	CPU	CPU	DSC1	CPU	CPU	CPU	DSC2	DSC2	CPU	PRN	CPC	CPU
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Assuming that the system has a process of each type, calculate the CPU usage, the average system return time and the waiting time for each job with the following CPU planning algorithms:

- FCFS
- Round-Robin with quantum=1.

Suppose that the rest of the queues are managed with a FCFS algorithm and that the first process in this system is type 1.

Solution Round Robin. Part I

Since the proposed activity is a little different, we will propose the solution (only a few steps).

To solve it, we will use the table on the next page, where for each moment of time we will write down where each process is located.

- At instant 0 both processes want to use the CPU, but only one can do it. Then P1 uses the CPU while P2 remains in the queue.
- At instant 1 the quantum ends so the P2 starts using the CPU. At that instant the P1 needs to use disk1. As he is free, P1 uses it.
- At instant 2 the quantum ends so the P2 has to go out the CPU. But the CPU queue is empty, because P1 continues working with the disc1, so another quantum is given to P2.

These three steps are equal in FCFS and RR with Q=1

can you continue?

FCFS

Instant	Queue Process	Process in CPU	Queue DSC1	DSC1	Queue DSC2	DSC2	Queue PR	PRN
0	P2	P1						
1		P2		P1				
2		P2		P1				
3		P2		P1				
4	P1	P2						
5	P1	P2
